

HERE'S WHAT OUR PATIENTS SAY...

"Each time I comb my hair, I see more growth. This program really works and I look forward to the next six months of my hair growing back!"

— Fred C., Insurance Agent

BEFORE

AFTER

"I have been a client for only 11 weeks and I am amazed at how much of my hair has already begun to grow back! This process is so easy and it is completely painless! I have tried everything from pills to topical treatments to toupees. This is the first thing that has really truly worked. Thank you!"

— Joe S., Real Estate Broker

BEFORE

AFTER

"This has restored not only my hair, but my self-confidence as well!"

— Troy M., Sales

REVÅGE670™

LASER HAIR RESTORATION THERAPY

REVÅGE670 LASER HAIR THERAPY is the revolutionary new non-invasive technology for men and women suffering from hair loss. It utilizes a patented state-of-the-art laser canopy in the fight against thinning hair. Using powerful, yet low level laser energy, the lasers stimulate the follicles in the scalp helping to increase energy production and reduce the effects of protein blocking DHT enzymes, thus promoting thickness and density.

REVÅGE670 is the only laser to employ RPT (Rotational Photo Therapy) for hair loss. This patented process enables coverage of the entire scalp through the use of 30 rotating diodes calibrated to precisely deliver consistent laser light throughout the treatment process. **REVÅGE670** is referred to as "cold" laser, because it does not have any thermal components. Low Level Laser Therapy (LLLT) is based on the scientific principle of photobiotherapy. Photobiotherapy occurs when laser light is absorbed by cells, which causes stimulation of cell metabolism and improved blood flow.

HISTORY OF REVÅGE670

REVÅGE670 LASER HAIR THERAPY has been used successfully for hair loss in Europe for over ten years, recent use in the United States has been well documented. Classified as a cosmetic laser it is safe for cosmetic use for both men and women. The mechanism by which it works has been well documented by the Wellman Labs for Photomedicine at Massachusetts General Hospital and Harvard University. Many Physicians are continuing further clinical research in conjunction with the Wellman Labs. In clinical studies average new hair growth was almost 40%.

If you are looking for an alternative to transplants and your doctor feels you are a good candidate then the **REVÅGE670** laser program is right for you.

The **REVÅGE670** laser "seems to take follicles that were dormant or on their way to dying out and wakes them up" according to Dr. Barry Dibernardo MD, FACS
